

MV-FUSION™

ENHANCING WIRELESS COMMS FOREVER™

NEXT GENERATION

Seventy-plus years ago, the *Walkie-Talkie* (and its cousin, the *Handie-Talkie*) transformed the battlefield. To this day, similar *Push-to-Talk* analog and digital radios continue to provide invaluable, real-time wireless comms for millions of users across industries ranging from Manufacturing to Law Enforcement and from Military to Industrial settings.

Now MULTIVOICE™ has introduced what some are calling the *Next Generation Walkie-Talkie*—the Wireless Mesh-Network Intercom™—a communications wonder that allows groups of up to forty-three (43) users to simultaneously and securely transmit and receive on the same wireless network.

GOOD – BETTER – BEST

While *PTT Radios* deliver *Good results* at countless installations worldwide, some organizations are opting for a *Better solution* by utilizing separate MULTIVOICE Intercoms in their comm environments.

But for the *Best of Both Worlds*, savvy institutions will deploy the MV-FUSION™ to unite the many-to-many, Full-Multiplex™ functionality of MULTIVOICE Intercoms with their existing PTT systems and/or cellular devices.

OVERVIEW

Use the MV-FUSION™ to unite Wireless Mesh-Network Intercoms™ with long-range *Push-to-Talk analog or digital radios* and/or *Cellular Phones* to enhance your comms capabilities and reach in the process.

SPECIFICATIONS

Dimensions: 2.3x1.8x0.9-inches

Encasement: Polycarbonate (black)

Connectors:

Top Headset Cable—HIROSE locking connector

Bottom Intercom Cable—HIROSE locking connector

Cables:

Intercom cable (length will vary)
